

## 7.2 ACT GOVERNMENT INVESTMENTS

### Overview

This chapter provides details of the Territory's investment arrangements, including investments held within the General Government investment portfolio and the Superannuation Provision Account (SPA) investment portfolio.

### Investments of the General Government Sector

Table 7.2.1 outlines the components of investments held by the General Government Sector.

**Table 7.2.1**

\* such as shares and property investments

## Management of Investments

The Department of Treasury manages the surplus cash balances of the ACT and invests funds in the money market within projected cash flow requirements and established investment policies. The Department is also responsible for the investment portfolio representing the total assets set aside for the Superannuation Provision Account (SPA).

The Department utilises the services of an independent external Investment Advisory Board and an Investment Consultant, Frontier Investment Consulting Limited to develop and implement investment objectives, strategies, benchmarks, funds manager research and appointment and other general investment advice as required.

In November 2001, Commonwealth Custodial Services (CCS) was appointed by the Territory to provide master custodian services to the Territory. CCS will provide the following services:

- Safekeeping; Settlement; Derivatives clearing; Valuation of investments; Accounting reconciliation; Accounting reporting; Mandate compliance reporting; Performance measurement; Performance reporting; Audit; Performance Attribution; Transition of assets; and Tax equivalent reporting.

A full review of all investment arrangements commenced in the year beginning with the SPA investment portfolio. A new Strategic Asset Allocation (SAA) policy for the SPA was

developed and endorsed. A fund manager configuration paper that supports the SAA policy is expected to be finalised before 30 September 2002.

SPA investment portfolio will almost certainly achieve a negative return for the year.

*The key initiatives for 2002-03 are:*

- implementing the new SPA investment objectives and strategy which will include a full review of all existing external fund manager appointments; and
- completing a full review of the investment objectives and strategies for the General Government investment portfolio.

## **Significant Investment Holdings**

### *General Government Investment Portfolio*

The cash of the general government not required for immediate expenditure is currently invested in a cash enhanced fund and a domestic fixed interest fund. These investment funds comprise the cash balance from the Territory Public Account and the cash held by ACT Government Departments. Territory Authorities and Territory Owned Corporations have the option of transferring funds to Treasury for investment.

A specialist external funds manager manages these funds on behalf of the Territory.

The key investment objective for these funds is to achieve returns greater than the cash rate. General government funds are invested in 'defensive' assets such as cash and high grade fixed interest bonds. The estimated nominal return for the portfolio for the 2001-02 financial year is 4.70%. The General Government investment portfolio was largely unaffected by the global recession experienced during the year as its exposure is limited to domestic cash and a small allocation to domestic fixed interest. It is expected that returns for 2002-03 will be significantly higher as a result of the increasing domestic interest rates arising from the Reserve Bank of Australia's monetary policy determinations. It is estimated that the full year return in 2002-03 will be in the order of 5.50%.

### *Superannuation Provision Account Investment Portfolio*

Funds are set aside in the Superannuation Provision Account (SPA) to assist the Government in meeting its long-term employer superannuation obligations. These funds are invested in accordance with an established asset allocation strategy that takes into account the long-term nature of the SPA liabilities and projected cashflow requirements.

These funds are managed by a number of specialist external funds managers. These include Australian Equities, International Equities, Australian Fixed Interest and Australian Property.

The key investment objective of the Superannuation Provision Account (SPA) is to achieve a long-term annual rate of return averaging 5% real (net of fees). This reflects the actuarially assumed earnings rate necessary to achieve a long-term objective of a 90% level of funding of the Territory employer superannuation liability by 2039-40.

A revised Strategic Asset Allocation (SAA), consistent with the investment objective, was endorsed during the year that will result in a much higher percentage of the total portfolio (85%) being invested in growth assets (such as equities and property) and a much smaller percentage (15%) of the portfolio being invested in defensive assets (such as cash and fixed interest investments). The previous SAA was 64% growth and 36% defensive. This new SAA will be implemented during 2002-03.

The change to the SAA is expected to yield significantly higher long-term earning rates than under the present SAA and is essential if the investment objective of 5% real is to be achieved in the medium to long term.

Due to the terrorist events of 11 September 2001 in the United States and the global recession, financial markets and, consequently investment returns had an adverse impact. This affected the SPA in particular due to the portfolio's exposure to equity markets and will almost certainly result in a negative return for the year. However, due to a higher than usual proportion of investment being held in cash (in anticipation of the review) the impact on the SPA was less than might otherwise be the case.

The following table (7.2.3) illustrates the estimated asset allocation break up of the SPA at 30 June 2002 and the estimated portfolio structure following the implementation of the new SAA as at 30 June 2003.

**Table 7.2.3**  
**Asset Allocation - Superannuation Investment Portfolio**

|                              | 2001-02     | 2002-03     |
|------------------------------|-------------|-------------|
| Cash                         | 19%         | 1%          |
| Australian Property          | 4%          | 10%         |
| Australian Fixed Interest    | 32%         | 7%          |
| Australian Equities          | 23%         | 30%         |
| Australian Private Equity    | -           | 5%          |
| International Fixed Interest | -           | 7%          |
| International Equities       | 22%         | 35%         |
| International Private Equity | -           | 5%          |
| <b>TOTAL</b>                 | <b>100%</b> | <b>100%</b> |

### *Other Significant Investment Holdings*

Investments of the ACT Insurance Authority are also managed by the Department of Treasury. Amounts included at Table 7.2.1 identify the increasing allocation of claims provisioning to cover future liabilities. For example, as medical malpractice and public liability claims can take a number of years to be paid, these funds can be set aside for investment purposes.

The investments of the Authority ensure that the Territory is able to meet the cost of its insurable claims and losses in an orderly, timely and cost effective manner, and protect the Territory's budget from the risk of substantial claims.

Another significant investment holding is that of the Home Loan Portfolio, also managed by the Department of Treasury. The level of investment reflects the repayment of home loans by clients, which are used to offset and repay historical debt relating to the original financing of the Home Loan Scheme.
